
One of thirty **A·D·S** modern galvanizing lines and upgrades

DoubleTime™ strip accumulator

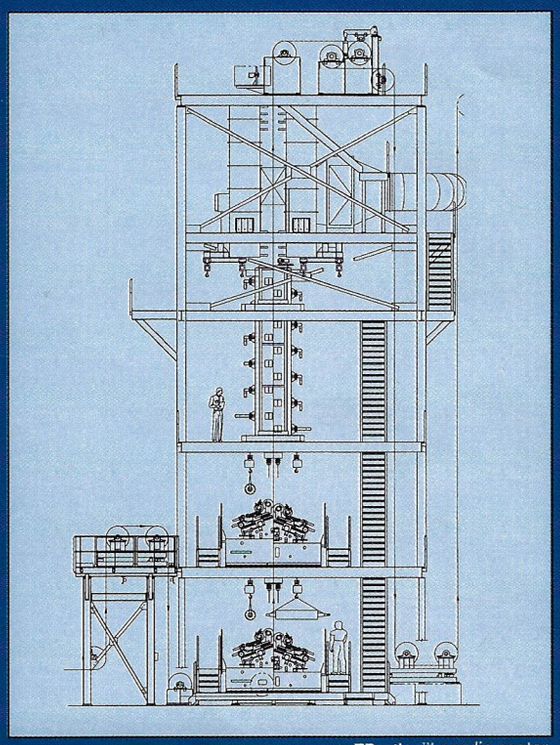
Galvanizing and Coating Lines

Come to **A·D·S** for new, moneymaking ideas like these.

If you want to increase the speed of a light gauge, coating line, check out our **DoubleTime**™ strip accumulators. We replaced the conventional looping towers in a coil coating line, and added enough strip storage—in the same amount of space—to permit a 100% increase in line speed.

We can help you get a larger share of the market for zinc-aluminum-coated steel roofing with our new **TRaction**™ coaters. They apply acrylic coatings that protect both the steel roofing and the workers who install it. For retarding oxidation, acrylic is just as effective as a slippery layer of oil—and much safer for installers.

Need good ideas? Call **330-399-3601.**



TRaction™ acrylic coater.
