GALVANIZING

A·D·S comes through.

From designing and building the world's lightest gauge line to refurbishing the heavy gauge line that went on to world record production.

If you apply special coatings to running flat rolled metal, A·D·S can design, build and install all the equipment you need at extremely competitive prices.

Equipment for hot dip galvanizing and electrolytic zinc plating. For electrolytic plating using chrome, nickel and other alloy coatings. For electrolytic tinning lines. Hot dip terne (lead) coating lines. Powder coating lines. And painting lines for ferrous and non-ferrous metals.

Also available: complete engineering analysis of your existing equipment. If needed, we can refurbish and modernize your existing line, a process that gives impressive results.

In addition to galvanizing and coating lines A·D·S can provide virtually any equipment (by piece or by line) needed for flat rolled metal production and processing.
