"We rely on this A·D·S *White Glove* cleaning system to help us produce prime silicon steels at WCI STEEL."

Duane Lanham, General Supervisor, WCI Steel, Inc., Warren, Ohio

"On our silicon annealing line, the strip surface has to be spotless when it enters the annealing furnace. So, we checked out cleaning systems supplied by half a dozen companies around the world. In the final analysis, the answer was right here in our own backyard.

"This **A·D·S** ***White Glove*** cleaning system removes iron fines, rolling oils, mill grime and other contaminants. It does its job extremely well—coil after coil. Since the system effectively removes abrasive iron fines from the strip surface, another benefit is longer roll life for our furnace hearth rolls. You can't ask more of your equipment than to have it work hard for you and your customers."

How about you and your customers? An **A·D·S** ***White Glove*** system can give you the exceptionally clean strip you want at a very affordable price. Call us at **330-399-3601.**
